Insul-Wrap Propane Cover Installation Procedure

- 1. Unroll the propane cover beside the tank. Lay the cover so the foil roof is flat and is the furthest away from the tank.**
- 2. Measure the propane tank to determine where to mark the foil bubble top in order to make the cut outs for the tanks' dome and the relief valve.**
- 3. Mark the foil bubble top for the cut outs.**
- 4. Using a utility knife or scissors cut a hole in the foil bubble for the dome, and another for the relief valve.**
- 5. Before lifting the cover into place fasten the top straps on both ends. This will reduce the potential for tearing at the seams.**
- 6. With one person at either end of the tank pull the cover over the top.**
- 7. Fasten the remaining end straps and belly straps.**
- 8. Install the dome cover.**
